

Blast Resistant Temporary Modules **To Meet Your Refinery Blast Zone Needs and API R.P. #753** *“Keeping Pace By Providing S.A.F.E Space”*

Our Blast Resistant Modules are built to protect people and equipment. This module was field tested for 10 PSI (25 msec duration) utilizing a 1250+ high explosive ANFO charge at a standoff distance of 110 ft. The module was constructed to our standard specifications, with roof and wall panels strengthened with tube steel stiffeners. The unit survived with no damage to the inside occupant.

Implementing API R.P. #753

We specialize in providing solutions to implement API R.P. #753. These engineered module systems can be designed to meet your specific needs with configurations for office use, storage systems, employee needs or to meet any other application. Contact us to discuss how these Blast Resistant Modules can work for you.
