

Blast Resistant Modules

To Meet Your United States and International Refinery Blast Zone Needs

“Keeping Pace By Providing Space”

A Box 4 U is currently working with several international clients:

- Equipping them with the safety and superiority that is engineered into our Blast Resistant Modules. Specializing in modifying these units for their needs.
- Configuring for office, storage, employee needs systems. Many new innovations, such as enhanced door and lighting applications, are also available.
- Wherever Blast Resistant requirements are needed, A Box 4 U is ready to provide what is necessary by designing for specific requirements.

Our Blast Resistant Modules are built to protect people and equipment. This module was field tested for 10 PSI (25 msec duration) utilizing a 1250+ high explosive ANFO charge at a standoff distance of 110 ft. The module was constructed to our standard specifications, with roof and wall panels strengthened with tube steel stiffeners. No damage was observed for the inside occupant. Front and end-walls were exposed to peak reflected pressures of approximately 20 psi with minimal or no damage.
