

Portable storage company offers new BRM models

A Box 4 U

The engineers at A Box 4 U — The Red Box Co. — know that work force safety and productivity is mandatory for all the products the company designs, engineers and manufactures. The company focus always lies in safety and saving lives. A Box 4 U has been involved in manufacturing blast-resistant modules (BRMs) since the petrochemical industry realized there was a dire need for them.

From the beginning, A Box 4 U has provided petrochemical clients with the safest and most cost-effective option for their facilities.

Keeping with that tradition, A Box 4 U is releasing two new exclusive blast-resistant modules — BRM Tool Crib and Multi-Section BRMs.

Blast-Resistant Tool Crib

Every custom designed blast-resistant tool crib offers workers both the safety and convenience of having tools, equipment and substances located nearby in their blast zone workplace. Each tool crib meets or exceeds API's 735 guidelines. All above-counter shelving comes with locking

latches and blast doors.

A Box 4 U's Blast-Resistant Tool Crib is manufactured to the company's standard modules specifications. These tool crib modules are engineered and designed to withstand a blast of 8 psi with a 200 msec duration.

Each custom designed unit is tailored to meet each customer's needs with a wide variety of features including compressed air inlets, tamperproof shielded overhead lighting, added lighted workbench area, chain fall and equipment tool racks for a variety of tools, wired for electric and data and a dual HVAC system that keeps the tool crib work area cool and comfortable.

Blast-resistant tool cribs are available in the standard size of 8 feet by 40 feet, or A Box 4 U can custom design and engineer tool cribs to meet any customer's specific requirements.

Multi-Section BRMs

A Box 4 U's other new release, the Multi-Section BRM effectively doubles the width of the company's 12-foot BRM to an astounding 24 feet. The new BRM contains all the standard features A Box 4 U has become known

for, including the company's world-renowned blast resistance.

The industry exclusive open design floor plans enable A Box 4 U to custom design and engineer any number of safe work environments. The new Multi-Section BRM features and options include:

- API 753 compliance.
- American Society of Civil Engineers low to medium response.
- Steel reinforced roof and wall panels.
- Two three inch ports for incoming electric and communication services.
- Restrooms.
- Break rooms and kitchenettes.
- Control rooms.
- Permit offices.

A Box 4 U understands the complete product line needed in a blast situation. The company has a wide variety of products to fit any company's needs. The company's headquarters are in Wichita, Kan., and it is an industry leader in the design and manufacture of safe, rugged, mobile and reliable BRMs.

Blast Resistant Modules

A Box 4 U's Blast Resistant Modules are built and engineered to protect people and equipment. These modules are field tested for a 8 psi @ 200 psi-msec duration blast utilizing 1250 lbs of high explosive ANFO at a standoff distance of 110 ft. The modules are constructed to A Box 4 U's standard specifications, which include roof and wall panels strengthened with tube steel stiffeners. The test unit survived with NO damage to the inside occupants!
